
EEPAYS s.r.o.

Eastern European Payment System (EEPS) is a payment institution registered with the Czech National Bank, Reg. No. 29415152. EEPS offers a wide range of payment services to personal and corporate clients including person-to-person funds transfers, prepaid and express payment cards, international, cross-border and domestic payments, payment acceptance for retail and wholesale enterprises.

We have been using ePay Suite payment processing software system developed by Canopus Innovative Technologies since the launch of operations in May 2013. We selected ePay Suite as a strategic platform because of its open architecture, rich functional coverage of both back office and front end processes, and flexible pricing structure.

With this system in place, we have automated and standardized end-to-end payment workflows and are enabled to manage all our financial products and services from a single point achieving high levels of processing efficiency and first-class client service.

The deployment project was quick and smooth with development work essentially limited to interfacing with external service providers and adapting the system to specific regulatory requirements of the Czech National Bank for the chart of accounts and reporting formats among others.

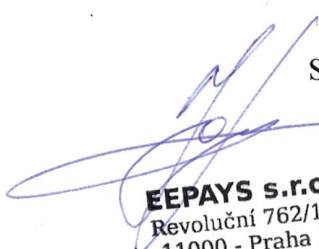

We are pleased to recommend ePay Suite as a payment processing platform for payment institutions, which meets the highest standards of reliability, security and usability - the key aspects of IT in the financial services industry.

ePay Suite allows us to compete effectively in this highly competitive market.

Kind regards,

Sergey Yurlov
